

Introducing the

BeeMax™ Hive

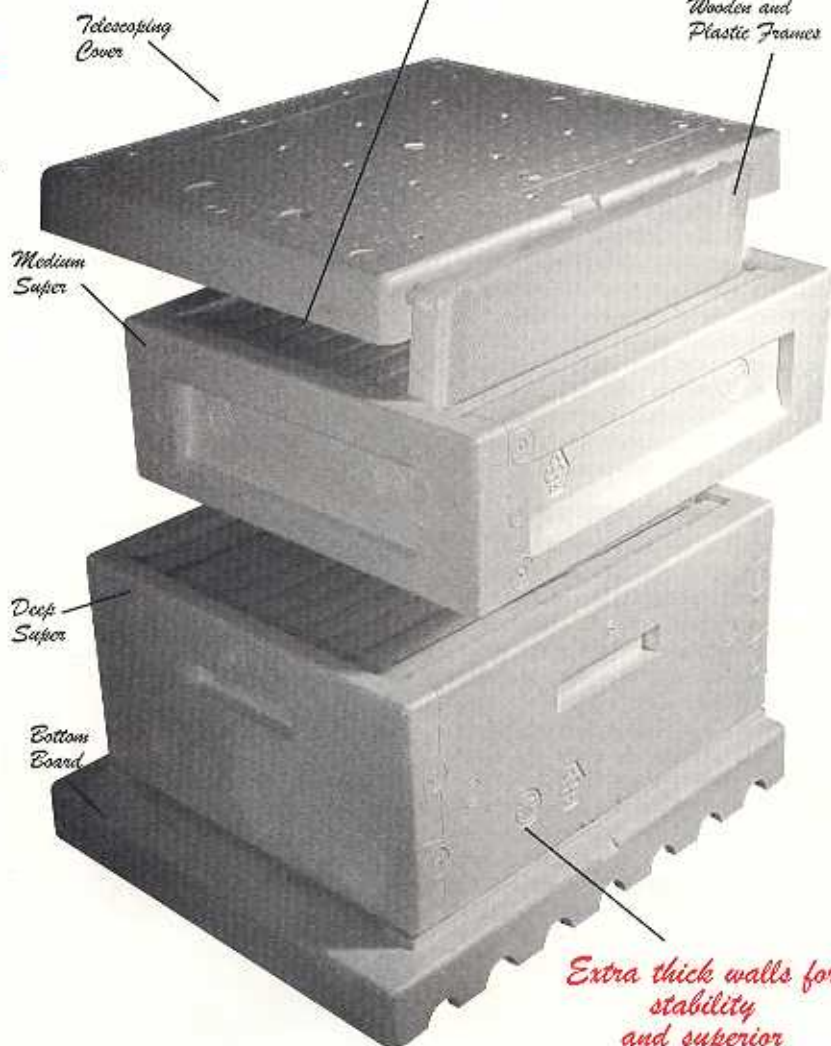

THE FIRST POLYSTYRENE HIVE MANUFACTURED IN NORTH AMERICA FOR NORTH AMERICAN CONDITIONS.

The BeeMax™ hive will keep your bees cooler in the summer and warmer in the winter – we guarantee it!

Excess moisture exits the surface of the hive and top cover thus minimizing moisture related problems. Because the bees can remain in a looser cluster, you can expect fewer starvation problems and increased brood rearing in the early spring. Compare for yourself. Run a BeeMax™ hive next to a wooden hive and see for yourself the difference in both brood and honey production.

Hard plastic frame rests for easy frame removal!

Accepts both Wooden and Plastic Frames

Built-in bottom ventilation and varroa screen!

Extra thick walls for stability and superior insulation!

Dove-tailed for added strength and ease of shipment!

"Mite resistant bees and a hive that fosters better wintering and increased spring brood-rearing may equal salvation for North American beekeeping."

BeeMax™ Hives are available from:

Betterbee Inc., 8 Meader Rd.,
Greenwich, N.Y. 12834 1-800-632-3379

Dadant and Sons, 51 S. Second St.,
